## Automated Production Line Solution

# PMW Multi-Column Automated Production Line

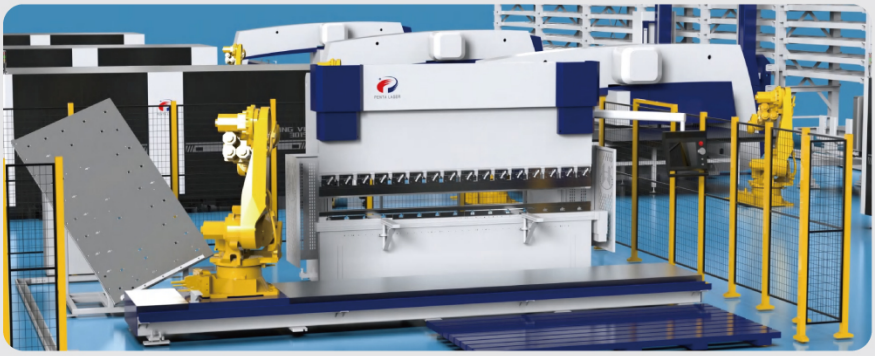
Penta Laser PMW Multi-Column Automated Production Line features strong equipment compatibility, enabling fully automated and seamless integration with various types of equipment. It can be paired with laser cutting machines, CNC turret punches, and CNC bending machines from other brands. Even imported brands (such as TRUMPF, AMADA, Prima Power, etc.) can be networked for one-click loading and unloading, forming a complete automated production line that meets the requirements of complex production processes.

## Characteristics

- Comes with standard WMS and central control systems.
- Saves space, boosts efficiency, lowers operating costs, and offers more flexibility than single-column warehouses.
- Features self-developed fork-type stackers (vs. common chain-hook type) for safer, more efficient operation.
- Layout customizable to plant dimensions; compatible with customer ERP/MES systems.
- Can be integrated with laser cutters, CNC punch presses, press brakes, and shears to form production lines.

## Optional Configurations

It can be customized to suit the customer's site



## Applications

Containers

Household Appliances

Kitchenware

Construction Machinery
